

# HOW TO USE, REJUVENATE, REUSE & RECYCLE SMELLEZE POUCHES FOR YEARS & YEARS

## 1. PLACE NEAR ODOR, ON AIR VENTS & IN DUCTS

For a breath of fresh air, remove the SMELLEZE Pouches from the outer plastic bags and simply place them near odors, in air ducts, and on return air vents without blocking the air flow.

You can use fans or open windows to increase air circulation for quicker results. SMELLEZE is also totally portable so feel free to move it around to get the maximum benefit.

## 2. REJUVENATE IN SUN

Place the SMELLEZE Pouches in direct sunlight for a day to rejuvenate and reuse. Turn the pouches around after a few hours to ensure that both sides get rejuvenated. For the best results, place the pouches on aluminum foil during rejuvenation to maximize the solar energy treatment. Rejuvenation will still work to some extent during cloudy days and in the winter but may be less effective.

## 3. REJUVENATE IN MICROWAVE

Place the SMELLEZE Pouches in a microwave and heat them at the low setting for 2-3 minutes. Turn them around after 30 second intervals to ensure the bag doesn't get burnt. The bag will feel moist after about 2 minutes which is expected. Continue to heat for another minute after this to dry completely. Wait to cool off or remove with an oven mitten for safety and reuse the pouches.

## 4. REUSE FOR YEARS OR RECYCLE

After you have rejuvenated the SMELLEZE Pouches they will be ready to reuse. They may be reused over and over again for 3 years or more.

When SMELLEZE reaches its end of life, it may be recycled by returning it back to nature. To do this, cut the pouch open and spread out the natural ingredients in your garden or house plants. They are sure to benefit from the nutritional value it provides.
